EXERCISE ON TABLES AND FORMS

Create the following form:

- All text fields in the form should be mandatory and should display an error if the user hits "**Register**" without having them filled.

- You should not be able to copy the text appearing as a hint in each textbox.

- The email field should throw an error if a valid email id is not entered by the user.

- The telephone field should follow the indicated pattern and should throw an error if the pattern is not followed.

- Date of birth should be a date field and should allow you to pick the date from a given month of a given year once you click on the field.

- The domicile field should be created with an html5 feature (not a **select** list that you create with the <select> tag).

Note:
Please compress the folder containing your code and upload to blackboard.
